Name: Nico Mahipus

Section: BSIT-3A

Learning Objective 1

Objective:

By the end of the lesson, students will be able to create a basic HTML webpage containing a heading, paragraphs, lists, and hyperlinks with at least 80% accuracy based on the given requirements.

SMART Analysis:

Specific: Create a webpage with essential elements.
Measurable: Includes all required HTML & CSS elements with at least 80% UI/UX.
Achievable: Appropriate for beginner web development learners.
Realistic: Based on lesson demonstrations and practice activities.
Timely: Completed within a 60-minute laboratory session.

Learning Experience:

Students will observe an HTML coding demonstration and complete guided exercises on creating webpage elements such as headings, paragraphs, lists, and hyperlinks.

Evidence:

Students submit a functioning HTML webpage that includes all required elements and meets at least 80% of the assessment criteria.

Learning Objective 2

Objective:

By the end of the class session, students will be able to design and style a webpage using CSS by applying colors, fonts, spacing, and layout properties according to a given design guide.

SMART Analysis:

Specific: Apply CSS styling to a webpage.
Measurable: Correct implementation of required design elements.
Achievable: Supported through guided coding activities.
Realistic: Matches the learners' current web development skills.
Timely: Completed within a 90-minute laboratory session.

Learning Experience:

Students will follow a demonstration of CSS selectors and properties, then customize their webpage using different styles and layout techniques.

Evidence:

Students submit a styled webpage that correctly applies the required CSS properties and follows the provided design specifications.

Learning Objective 3

Objective:

By the end of the laboratory session, students will be able to develop a responsive multi-section website using HTML and CSS that includes a navigation bar, content sections, images, and a footer that functions correctly on desktop and mobile screens.

SMART Analysis:

Specific: Create a responsive website with multiple sections.
Measurable: Includes navigation bar, content sections, images, and footer.
Achievable: Based on previous HTML and CSS lessons.
Realistic: Appropriate for introductory web development students.
Timely: Completed during a 2 hour laboratory session.

Learning Experience:

Students will participate in a hands-on web development workshop where they create and test a responsive website using HTML and CSS.

Evidence:

Students successfully present a responsive website that meets all project requirements and passes functionality and design checks on different screen sizes.
